Effective online protest is badly needed

Just Married: Groom Changes Facebook Relationship Status at the Altar [VIDEO]

We've seen plenty of [Twittered marriage proposals](#), but a recent video posted to YouTube takes the cake for the most unconventional [Twitter](#) and [Facebook](#) update.

During his wedding ceremony, Dana Hanna whipped out his mobile device and not only changed his relationship status to married on [Facebook](#), but also sent out a [tweet](#) announcing that the couple had become man and wife.

- Everything else moving online
- Powerful organisations have increasingly little physical presence
- Social movements are increasingly dispersed physically

Critical Art Ensemble, 1996

Effective online protest is badly needed

The Facebook logo, consisting of the word "facebook" in white lowercase letters on a blue rectangular background.

Denning's taxonomy of digital movements

1 Online Activism

- Education & awareness building
- Fundraising
- Petitions
- C & C

2 Hacktivism

- Denial of service
- Mail bombs
- Google bombs
- Website defacement
- Harassment & "griefing"

3 Cyber-terrorism

- Triggering physical violence

ADOPT YOUR MP!

Please adopt your MP and visit them to explain why disconnection is wrong!

32,000 people have signed the petition against disconnection. Stephen Fry, Alan Davies, Graham Linehan and ORG patron Neil Gaiman supported massive efforts to get people to sign

But a petition is not enough. It's changed the public debate, brought the media onside and got people active. But now we need targeted action to persuade the people making the decision to change this legislation: our MPs.

Visits from voters like you will change the minds of MPs. It works, because it shows people really care about their rights.

[Email us now to say you can help](#)

It's very simple. Tell us who your MP is and who you are. (If you don't know, you can find them on [here](#))

Just drop a mail to volunteers@openrightsgroup.org saying you will visit your MP. We'll put them [on our list of MPs being visited](#). Do specify if you'd rather remain anonymous.

[How can I contact my MP?](#)
[What do I tell my MP?](#)

When you visit them, let us know what they say, and we will record their opinions on our website and wiki.

Thank you for taking action today!

Thank you for any help you can give. A quick response will cut our workload as we will quickly get a list of MPs who still need lobbying. You can find more actions [here](#).

Open Rights Group, UK, 2010

WarGames (film), 1983

Effective protest usually demonstrates two things

1 **Morality**

- Non-violence, solidarity, democracy

2 **Commitment**

- Number of supporters
- Level of dedication to cause

Effective protest usually demonstrates two things

1 **Morality**

- Non-violence, solidarity, democracy

2 **Commitment**

- Number of supporters
- Level of dedication to cause

The man who strikes first admits that his ideas have given out.

-Chinese proverb

There is no such thing as defeat in non-violence.

-César Chávez

I have nothing new to teach the world. Truth and non-violence are as old as the hills.

-Mohandas Gandhi

Adherents believe hacktivism is non-violent

WARNING: This is a Protest, it is not a game, it may have personal consequences as in any off-line political manifestation on the street:

- 1 Your IP address will be harvested by the government during any FloodNet action...(Similar to having your picture taken during a protest action on the street.)
- 2 Possible damage to your machine may occur because of your participation in the FloodNet action. (Just as in a street action -the police may come and hurt you.)
- 3 FloodNet clogs bandwidth and may make it difficult for individuals to get information. (This also happens when people take to the streets. Individuals may find themselves unable to get to work because of the action.)

We hope that when you join our Virtual Sit-in's in support of global communities of resistance, you will take the above information to heart.

'I'm With Coco': Inside the Conan O'Brien support movement

by [Margaret Lyons](#)
Categories: [Art](#), [Late Night](#)

The Internet is a-buzz with support for Conan O'Brien, but there seems to be one image that's the beating heart of the entire campaign. LA-based designer [Mike Mitchell](#)'s "I'm With Coco" poster has reached levels of ubiquity we haven't seen since Shepard Fairey took on Obama. EW caught up with Mitchell, 27, to ask him about designing a movement.

"I'm a huge Conan fan," Mitchell says. "I went to one of the first test shows [for *The Tonight Show*] here in L.A. and I've been a big fan for a long time." Of the [late-night debacle at NBC](#), he adds: "The whole thing's just a crappy situation."

Mitchell set out to design a campaign-style poster, which initially read "I'm with Conan in 2010," in the hopes that it would "maybe start a movement thing?" A friend suggested just "I'm with Conan," and Mitchell landed on the far-catchier "I'm with Coco." It's a slogan even *Swiss Miss* could be jealous of.

Cryptographic details

1 Setup

- P generates a master key pair $(k_*^{\text{pub}}, k_*^{\text{priv}})$
- P generates N shares $s_1 \dots s_N$ of k_*^{priv}
- P generates a symmetric escrow key k_e

2 Registration

- Each protester p_i sends password x_i to P
- P checks validity of i
- P sends $\text{ZKP}(x_i)$ to \mathcal{O} , updates password to random x'_i
- P sends a share s_i of k_*^{priv} to p_i

3 Protest

- P signs & publishes:

$$\left\{ E_{k_e} \left(E_{k_i^{\text{pub}}} (x'_i) \right) \mid 1 \leq i \leq n \right\}, \quad E_{k_*^{\text{pub}}} (k_e)$$

- P destroys k_*^{priv}, k_e

4 Completion

- P generates two escrow keys k_{e+}^i and k_{e-}^i **per protester**
- P signs & publishes:

$$\left\{ E_{k_{e+}^i} \left(E_{k_i^{\text{pub}}} (x'_i) \right), E_{k_{e-}^i} (y'_i), E_{k_*^{\text{pub}}} (k_{e+}^i), E_{k_*^{\text{pub}}} (k_{e-}^i) \mid 1 \leq i \leq n \right\}$$

Password oracle \mathcal{O}

- Maintains password table $T : \mathbb{Z} \rightarrow \{0, 1\}^*$
- Will update $T[i]$ given $(i, \text{ZKP}(T[i]), T[i]')$
- Must be **indifferent** to goals of protest

Protocol details—participants

Protesters $p_1 \dots p_N$

- Each has a password x_i registered with \mathcal{O}
- Also has a key pair $(k_*^{\text{pub}}, k_*^{\text{priv}})$

Protest initiator P

- Has a known public key k_P^{pub}
- Must be **trusted** by all protesters

Protocol details—cryptography

1 Setup

- P generates a master key pair $(k_*^{\text{pub}}, k_*^{\text{priv}})$
- P generates N shares $s_1 \dots s_N$ of k_*^{priv}
- P generates a symmetric escrow key k_e

2 Registration

- Each protester p_i sends password x_i to P
- P checks validity of i
- P sends $\text{ZKP}(x_i)$ to \mathcal{O} , updates password to random x'_i
- P sends a share s_i of k_*^{priv} to p_i

3 Protest

- P signs & publishes:

$$\left\{ E_{k_e} \left(E_{k_i^{\text{pub}}} (x'_i) \right) \mid 1 \leq i \leq n \right\}, \quad E_{k_e^{\text{pub}}} (k_e)$$

- P destroys k_*^{priv}, k_e

4 Completion

- Protest ends when t protesters agree to decrypt k_e

Protocol details—cryptography

1 Setup

- P generates a master key pair $(k_*^{\text{pub}}, k_*^{\text{priv}})$
- P generates N shares $s_1 \dots s_N$ of k_*^{priv}
- P generates a symmetric escrow key k_e

2 Registration

- Each protester p_i sends password x_i to P
- P checks validity of i
- P sends $\text{ZKP}(x_i)$ to \mathcal{O} , updates password to random x'_i
- P sends a share s_i of k_*^{priv} to p_i

3 Protest

- P signs & publishes:

$$\left\{ E_{k_e} \left(E_{k_i^{\text{pub}}} (x'_i) \right) \mid 1 \leq i \leq n \right\}, \quad E_{k_e^{\text{pub}}} (k_e)$$

- P destroys k_*^{priv}, k_e

4 Completion

- Protest ends when t protesters agree to decrypt k_e

Protocol details—cryptography

1 Setup

- P generates a master key pair $(k_*^{\text{pub}}, k_*^{\text{priv}})$
- P generates N shares $s_1 \dots s_N$ of k_*^{priv}
- P generates a symmetric escrow key k_e

2 Registration

- Each protester p_i sends password x_i to P
- P checks validity of i
- P sends $\text{ZKP}(x_i)$ to \mathcal{O} , updates password to random x'_i
- P sends a share s_i of k_*^{priv} to p_i

3 Protest

- P signs & publishes:

$$\left\{ E_{k_e} \left(E_{k_i^{\text{pub}}} (x'_i) \right) \mid 1 \leq i \leq n \right\}, \quad E_{k_*^{\text{pub}}} (k_e)$$

- P destroys k_*^{priv}, k_e

4 Completion

- Protest ends when t protesters agree to decrypt k_e

Protocol details—cryptography

1 Setup

- P generates a master key pair $(k_*^{\text{pub}}, k_*^{\text{priv}})$
- P generates N shares $s_1 \dots s_N$ of k_*^{priv}
- P generates a symmetric escrow key k_e

2 Registration

- Each protester p_i sends password x_i to P
- P checks validity of i
- P sends $\text{ZKP}(x_i)$ to \mathcal{O} , updates password to random x'_i
- P sends a share s_i of k_*^{priv} to p_i

3 Protest

- P signs & publishes:

$$\left\{ E_{k_e} \left(E_{k_i^{\text{pub}}} (x'_i) \right) \mid 1 \leq i \leq n \right\}, \quad E_{k_*^{\text{pub}}} (k_e)$$

- P destroys k_*^{priv}, k_e

4 Completion

- Protest ends when t protesters agree to decrypt k_e

Protocol details—group suicide

Irish hunger strike

HM Prison Maze, Belfast, UK, 1981

- P generates two escrow keys k_{e+} and k_{e-}
- P signs & publishes:

$$\left\{ E_{k_{e+}} \left(E_{k_i^{\text{pub}}} (x'_i) \right), E_{k_{e-}} (y'_i) \mid 1 \leq i \leq n \right\}, \quad E_{k_*^{\text{pub}}} (k_{e+}), E_{k_*^{\text{pub}}} (k_{e-})$$

- y'_i is an **account destruction** key
 - Not protected by p_i 's private key
 - May be explicitly provided by \mathcal{O} , or be x'_i if we trust griefers

Protocol details—individual destruction

Boston Massacre

Boston, MA, USA, 1770

- P generates two escrow keys k_{e+}^i and k_{e-}^i **per protester**
- P signs & publishes:

$$\left\{ E_{k_{e+}} \left(E_{k_i^{\text{pub}}} (x'_i) \right), E_{k_{e-}} (y'_i), E_{k_*^{\text{pub}}} (k_{e+}^i), E_{k_*^{\text{pub}}} (k_{e-}^i) \mid 1 \leq i \leq n \right\}$$

- Individual accounts can be unlocked or destroyed
 - May choose accounts at random to destroy at regular intervals

Indifference of \mathcal{O}

- Can't protest against platform operator itself
- \mathcal{O} can block password updates, reinstate deleted accounts

Minority of platform users involved

- \mathcal{O} will block a protest which costs it too much
- Less commitment shown if all users leave at once

Limitations

	9611  	80	 Night Elf	 Hunter	<ul style="list-style-type: none">✓ WotLK Enabled✓ Transferable✓ Guaranteed✓ Faction Change✓ US Account	\$627.00 More Info Add to Cart Quick Look

Value of online identities

- Real-world protest holds all lives to have equal value
- Online identities only valuable if built up over time

Central trust

- Hard to avoid due to circular dependencies during initiation
 - Distributed protocol possible?
- P can go offline after initialisation
 - Replace P with an HSM?

Voting Issues

- Threshold Decryption \neq voting
 - Need a robust, homomorphic scheme, at minimum
- Infiltration/sybil attacks
 - Acquire many shares (votes) by submitting dummy profiles
- Splinter coalition
 - Conspiracy can secede, refuse to unlock some profiles
